9  <meta name="description" content="Description"/>
10 <meta name="keywords" content="Keywords"/>
11 <!-- CSS -->
12 <link rel="stylesheet" href="css/demo.css">
13 <!-- JS -->
14 <script src="https://ajax.googleapis.com/ajax/libs/jquery/1.9.1/jquery.min.js"></script>
15 <script src="js/demo.js"></script>
16 </head>
17 <body>
18   <h1>一級標題</h1>
19   <h2>二級標題</h2>
20   <h3>三級標題</h3>
21   <h4>四級標題</h4>
22   <h5>五級標題</h5>
23   <h6>六級標題</h6>
24   <br>
25   <p>Hello world!</p>
26   <button>點我更換 Hello World</button>
27 </body>
28 </html>
```

# CSS

## Cascading Style Sheets

```
# demo.css x
1  body{
2      background-color: #595959;
3      color: #FFF;
4      text-align: center;
5  }
6
7  h1,h2,h3,h4,h5,h6{
8      display: none;
9  }
10
11 p{
12     position: absolute;
13     width: 50%;
14     height: 60%;
15     top: 20%;
16     left: 25%;
17     font-size: 100px;
18     line-height: 100px;
19     font-weight: bolder;
20     font-family: 'Arial';
21     text-align: center;
22 }
23
24 button{
25     margin: 0 auto;
26     display: inline-block;
27 }
```

JavaScript 唯一被各家瀏覽器  
所共同支援的程式語言

jQuery JavaScript 函式庫

```
JS demo.js x
1  $(function() {
2      var helloWorld = ['Hello world!', 'Hello everyone!']
3
4      $('button').on('click', function(){
5          if($('p').text() === helloWorld[0]){
6              $('p').text(helloWorld[1])
7          }else{
8              $('p').text(helloWorld[0])
9          }
10     })
11 });
12
```

51 </html>
```

# CSS3

## CSS3 introduction

## Media Queries

## Transform, Transitions, Animation

```
# html5.css x
83
84 @media screen and (max-width: 1000px) {
85     .wrapper{
86         width: 100%;
87         margin: 50px auto;
88     }
89
90     header{
91         height: auto;
92     }
93
94     header .logo{
95         width: 80%;
96         margin: 20px 10%;
97     }
98
99     header nav{
100         width: 100%;
101         height: 50px;
102         margin-left: 0%;
103         margin-top: 0;
104     }
105 }
106
```

# Bootstrap

[bootstrap introduction](#)

faster development, but too heavy

# Sass, Scss, Compass

## 巢狀結構

@include, @mixin, @function...

利用  **compass** - 解決前綴字

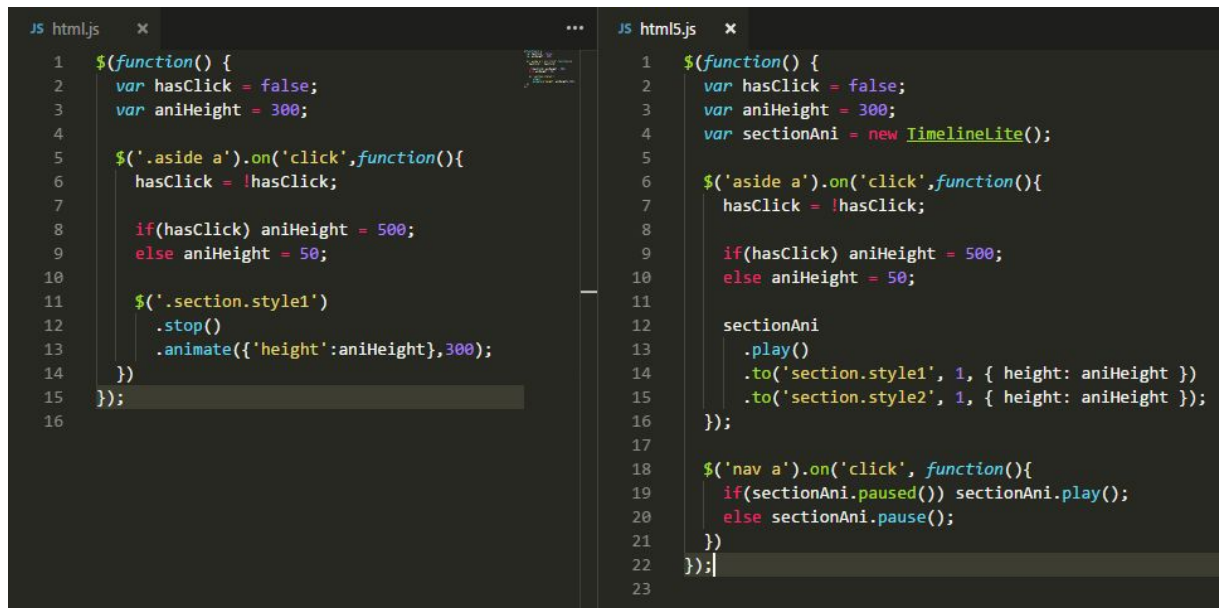

```
# html5.css x ...
1 .wrapper{
2   width: 1000px;
3   margin: 50px auto;
4 }
5
6 header{
7   width: 100%;
8   height: 150px;
9   border: 1px solid #999;
10  margin-bottom: 20px;
11  float: left;
12 }
13
14 header .logo{
15   width: 15%;
16   height: 150px;
17   background-color: #999;
18   float: left;
19 }
20
21 header nav{
22   width: 75%;
23   height: 50px;
24   margin-left: 5%;
25   margin-top: 80px;
26   background-color: #e8e8e8;
27   float: left;
28 }
29

# html5.scss x
1 .wrapper{
2   width: 1000px;
3   margin: 50px auto;
4 }
5
6 header{
7   @include r(100%,150px);
8   border: 1px solid #999;
9   margin-bottom: 20px;
10 }
11
12 .logo{
13   @include r(15%,150px);
14   background-color: #999;
15 }
16
17 nav{
18   @include r(75%,50px);
19   margin-left: 5%;
20   margin-top: 80px;
21   background-color: #e8e8e8;
22 }
23
24 a{
25   @include r(20%);
26   width: 20%;
27   line-height: 50px;
28   text-align: center;
29 }
30 }
```

# TweenMax

Timeline progress

Optimization

```
JS html.js x 1 $(function() {  
2   var hasClick = false;  
3   var aniHeight = 300;  
4  
5   $('aside a').on('click',function(){  
6     hasClick = !hasClick;  
7  
8     if(hasClick) aniHeight = 500;  
9     else aniHeight = 50;  
10  
11     $('.section.style1')  
12       .stop()  
13       .animate({'height':aniHeight},300);  
14   })  
15 });  
16
```

```
JS html5.js x 1 $(function() {  
2   var hasClick = false;  
3   var aniHeight = 300;  
4   var sectionAni = new TimelineLite();  
5  
6   $('aside a').on('click',function(){  
7     hasClick = !hasClick;  
8  
9     if(hasClick) aniHeight = 500;  
10    else aniHeight = 50;  
11  
12    sectionAni  
13      .play()  
14      .to('section.style1', 1, { height: aniHeight })  
15      .to('section.style2', 1, { height: aniHeight });  
16    });  
17  
18    $('nav a').on('click', function(){  
19      if(sectionAni.paused()) sectionAni.play();  
20      else sectionAni.pause();  
21    })  
22  });  
23
```

Use node.js, npm

compile html, css, js

run a webserver (with LiveReload)

compress photo (png,jpg...)

## Jade introduction

簡化 html

## include template

```
jade.html x
1 <!DOCTYPE html>
2 <html lang="en">
3   <head>
4     <title>Jade</title>
5     <script type="text/javascript">
6       <<![CDATA[
7         if (foo) {
8           bar()
9         }
10      >>>]]>
11   </script>
12 </head>
13 <body>
14   <h1>Jade - node template engine</h1>
15   <div id="container">
16     <p>You are amazing</p>
17   </div>
18 </body>
19 </html>

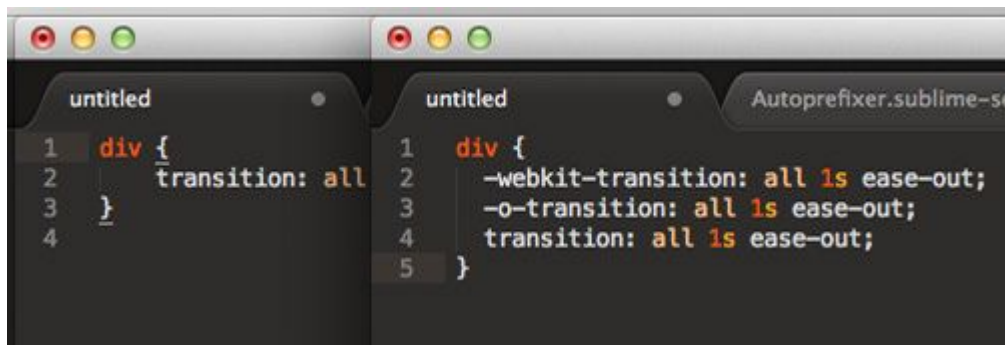

jade.jade x
1 !!! 5
2 html(lang="en")
3   head
4     title= pageTitle
5     :javascript
6       | if (foo) {
7       |   bar()
8       | }
9   body
10    h1 Jade - node template engine
11    #container
12      - if (youAreUsingJade)
13        You are amazing
14      - else
15        Get on it!
16        Get on it!
17        Get on it!
18        Get on it!
```

# Autoprefixer

better than compass

without @include

# Aangular JS

First Time - JS Data Binding

First Time - Lifecycle

MVW - Model-View-Whatever

todoMVC: [Demo](#) [Source](#)

# Multi-page -> SPA

Single Page Application

解決 poor user experience

減少伺服器傳輸成本

前後端分離

# 前後端分離

可同時進行開發

不用維護同一份檔案, 資料架構

利前端使用 JS framework

利後端專注 data processing, API development

以上是 2 年前的我

jade -> **Pug**

美玉變巴哥???

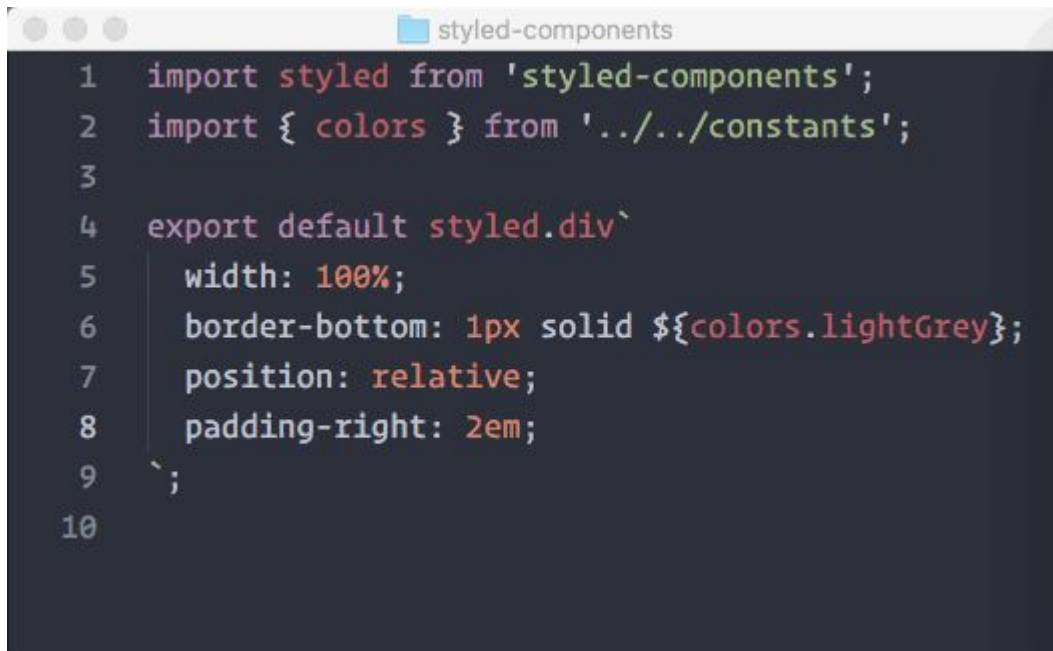

# Styled-components

base on [Css Modules](#)

component css

local-scoped

```
1 import styled from 'styled-components';
2 import { colors } from '../constants';
3
4 export default styled.div`
5   width: 100%;
6   border-bottom: 1px solid ${colors.lightGrey};
7   position: relative;
8   padding-right: 2em;
9 `;
10
```

# ES6

## Introduction

## ES5 ES6 Diff

## classes

```
JS Index.js x
1 var IndexBgVideo;
2 class Index {
3   constructor() {
4     this.HeaderModel = new HeaderModel();
5     this.fps = 30;
6     this.indexAlpha = 0.4;
7     this.indexAlphaSpeed = 0.1;
8     this.openani = false;
9     this.IndexCanvas = document.getElementById("index");
10    this.stage = new createjs.Stage(this.IndexCanvas);
11    this.stage.enableMouseOver(this.fps);
12
13    $(window).load(this.window_load.bind(this));
14  }
15  window_load(){
16    tracker_pg('/index');
17    this.queue = new createjs.LoadQueue(false);
18    this.queue.loadManifest(
19      [
20        {
21          id : 'Mvideo',
22          src : 'images/IS200T.mp4'
23        },
24        {
25          id : 'aud'
26        }
27      ]
28    );
29  }
30 }

JS HeaderModel.js x
1 class HeaderModel {
2   constructor() {
3     this.StageModel = new StageModel();
4     this.mainurl = 'http://www.lexus.com.tw/event/201611_IS/';
5
6     FB.init({
7       appId      : '147727495702937',
8       channelUrl  : this.mainurl,
9       status      : true,
10      xfbml        : true,
11      cookie       : true
12    });
13
14    //menubtn
15    this.menubtn = $('#menubtn');
16    this.menubtn.on('click',function(){...}).bind(this);
17
18    //fb_icon
19    this.fbIcon = $('#fb_icon');
20    this.fbIcon.on('click',function(){...}).bind(this);
21
22    //menu
23    this.menu = $('#menu');
```

# Webpack

entry, bundle, output

Loader

```
JS webpack.config.js x
1  const webpack = require('webpack');
2  const ExtractTextPlugin = require('extract-text-webpack-plugin');
3  const autoprefixer = require('autoprefixer');
4
5  let extractStyles = new ExtractTextPlugin('css/common.css')
6  let extractHtml = new ExtractTextPlugin('[name].html')
7  let BabiliPlugin = require("babili-webpack-plugin")
8
9  module.exports = {
10   context: __dirname,
11   devtool: 'source-map',
12   entry: {
13     index: './src/js/app.js',
14     // about: './src/js/about.js',
15   },
16   output: {
17     path: __dirname + '/dist',
18     // filename: 'js/[name].js'
19     filename: 'js/app.js'
20   },
21   module: {
22     rules: [
23       {
24         test: /\.pug$/,
25         loader: extractHtml.extract({
26           loader: ['html-loader', 'pug-html-loader?pretty&exports=false']
27         })
28       }
29     ]
30   }
31 }
```

# Webpack

multi task?  
one bundle -> multi loader -> one page

Lifecycle better

Virtual dom

performance better

todoMVC: [Demo](#) [Source](#)

.jsx

functional component

styled components

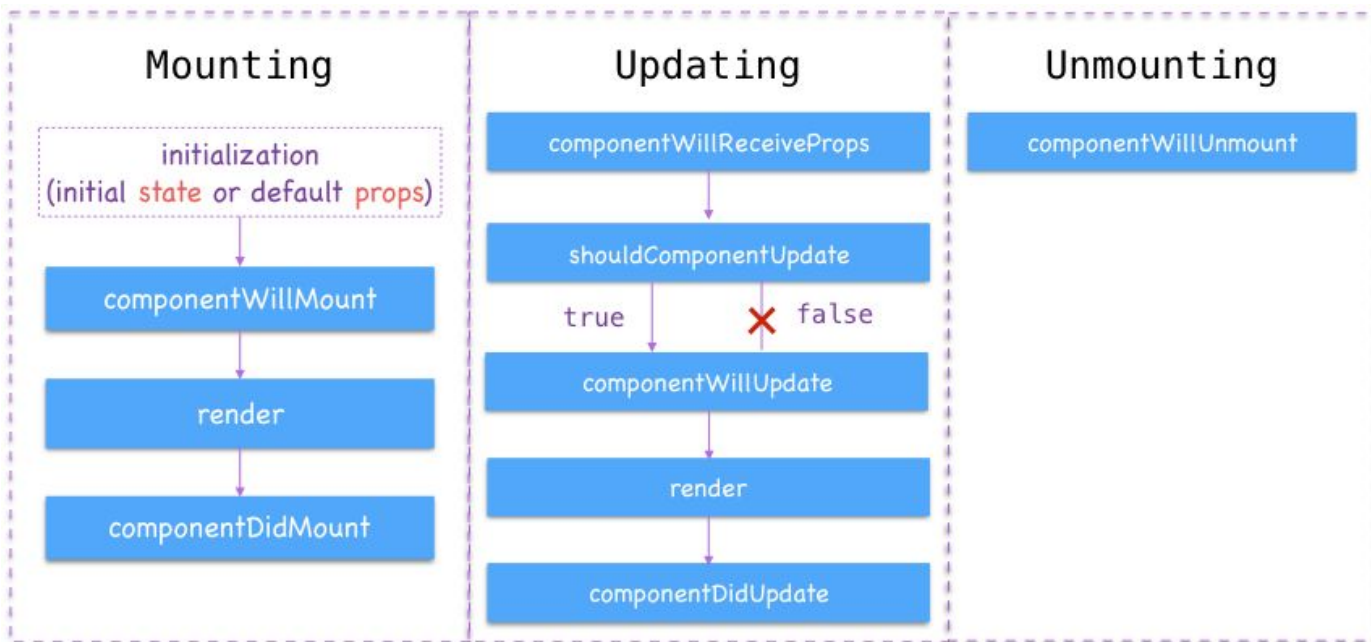

react router

react redux

這麼cool, 怎麼可以不用 react ?!

這麼cool, 怎麼可以不用 react ?!

因為太囉嗦... 我覺得不行

Vue.js

MVVM

Lifecycle better (for me)

Virtual dom

todoMVC: [Demo](#) [Source](#)

vuex - like redux

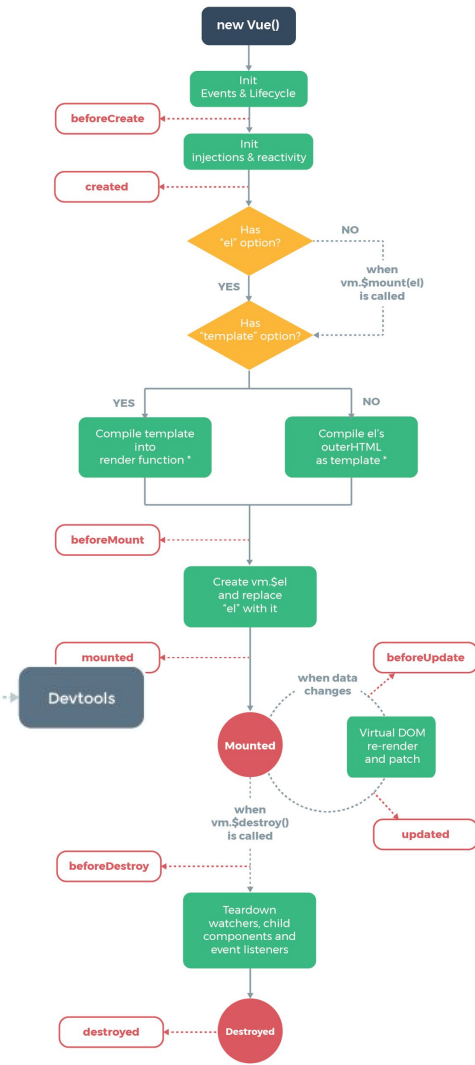

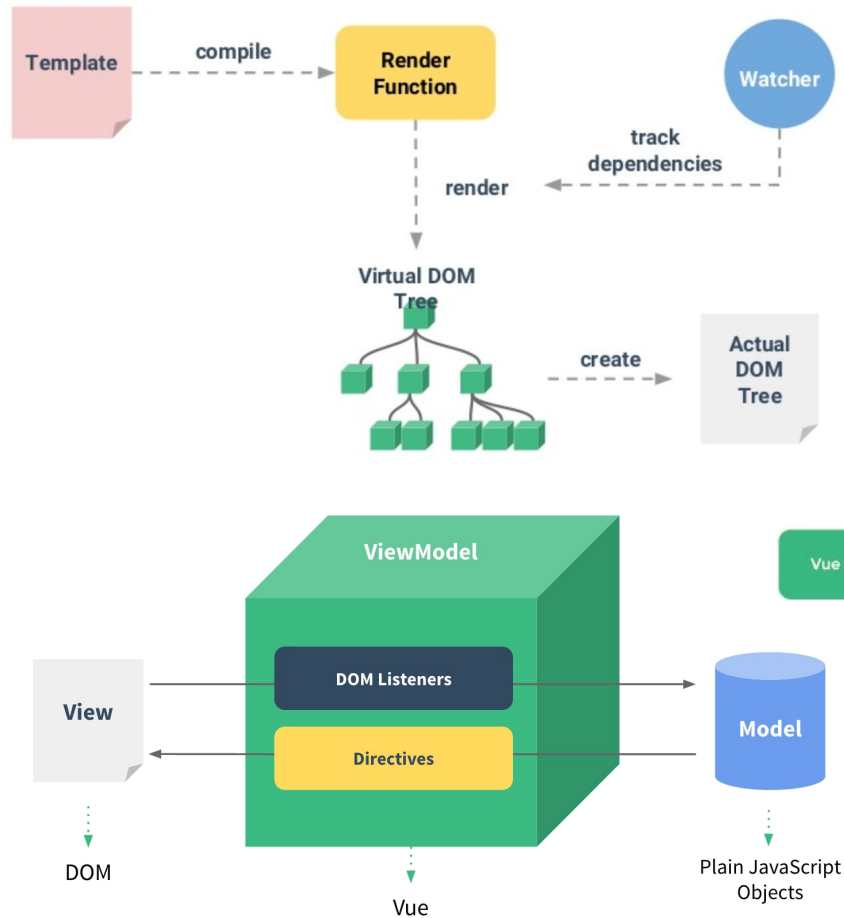

vue router

.vue

- componential

- scoped css

# Vue.js

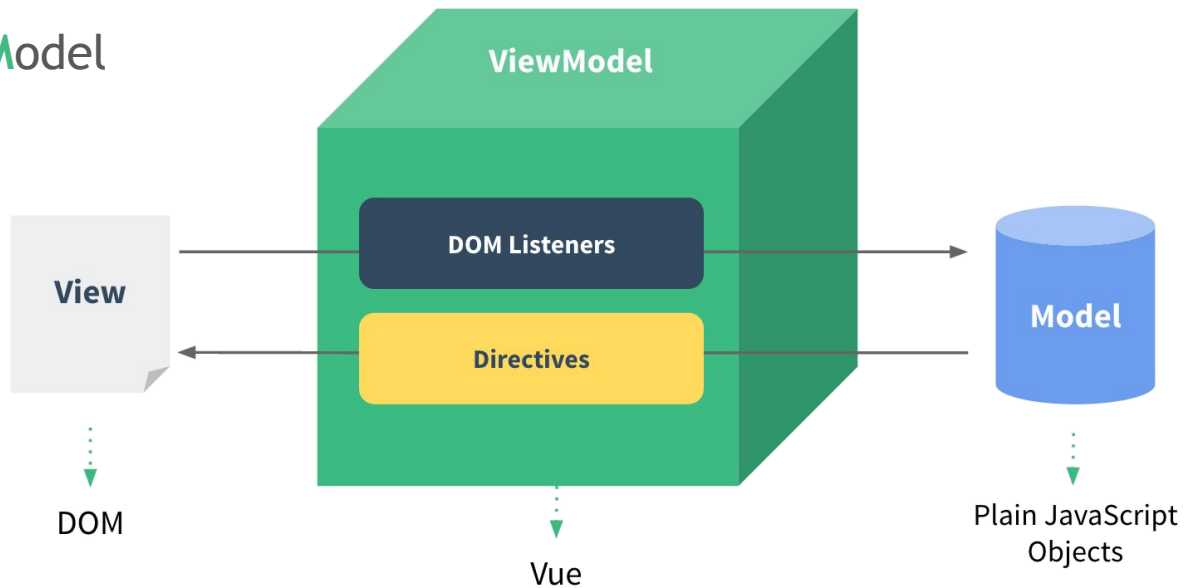

先嚇嚇他 . . .

# Vue.js - MVVM

Model-View-ViewModel

# Vue.js - Lifecycle

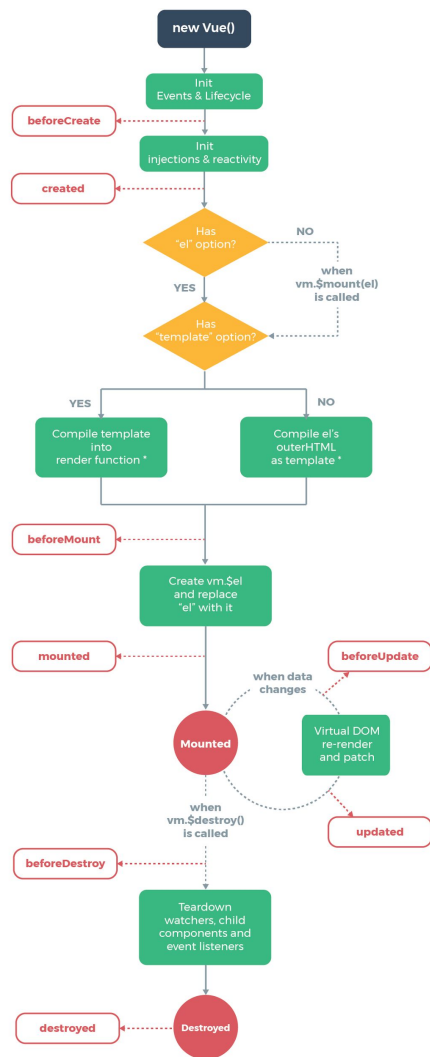

beforeMount

mounted

watch

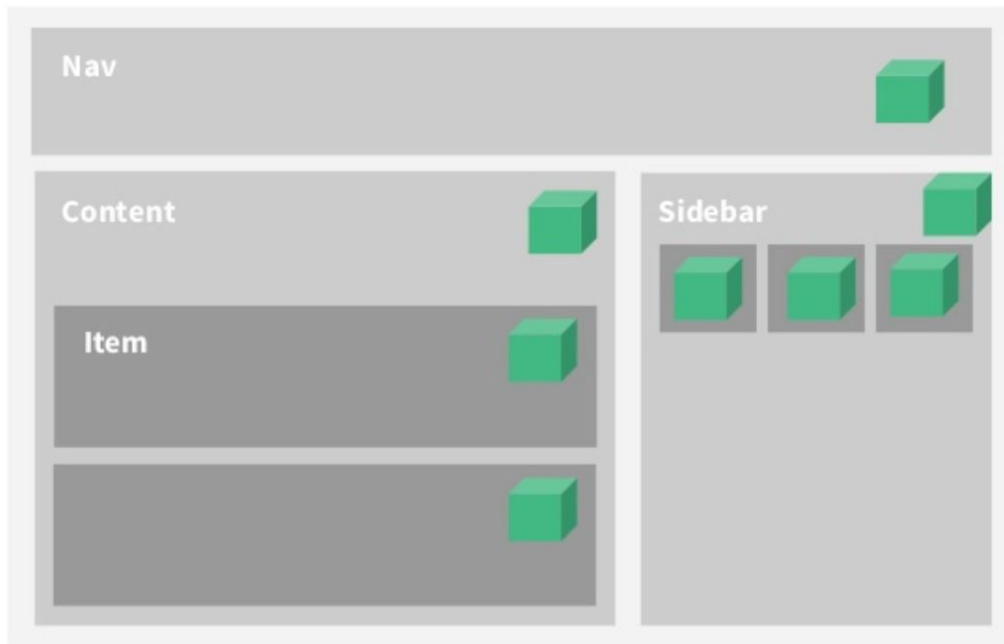

beforeDestroy

destroyed

# Vue.js - Virtual DOM

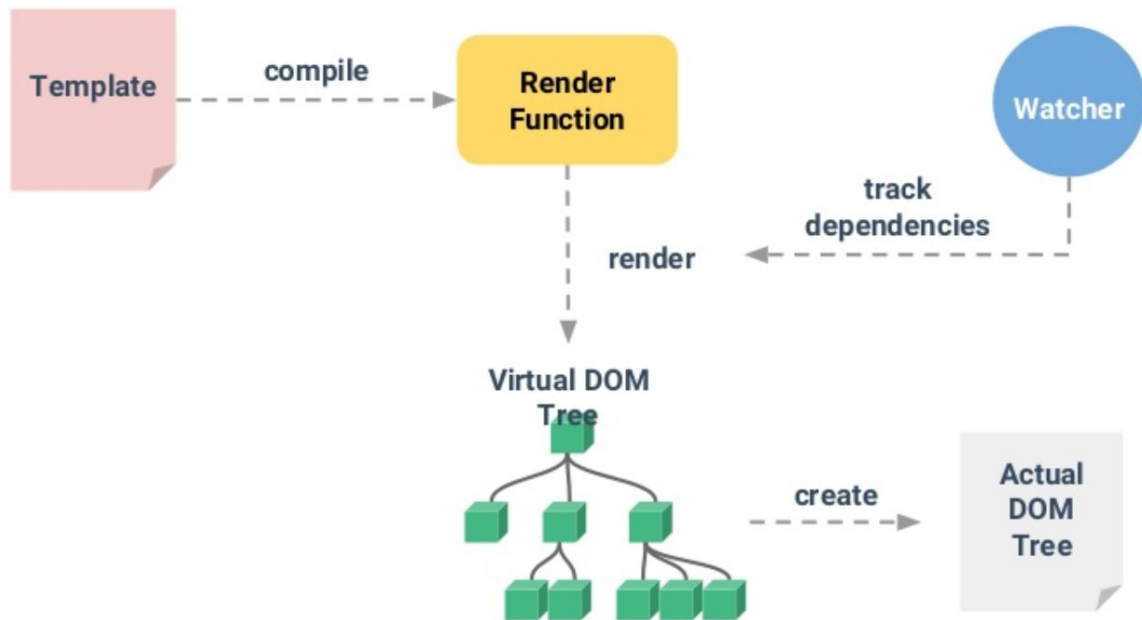

# Vue.js - Virtual DOM

# Vue.js - Virtual DOM

比對 Virtual 與 Actual

做出最優化的 update

# Vue.js - .vue

better maintenance

one .vue -> one **ViewModel**

- 包含所有 **view** 所需元素 (html,css,js)

**scoped** css

```
Index.vue x
1 <style lang="scss" scoped>
2 @import "../css/index/index.scss";
3 </style>
4
5 <template lang="pug">
6   .wrapper.index
7
8 </template>
9
10 <script>
11
12 export default {
13   name: 'Index',
14   data(){
15     return {
16       ||
17     }
18   },
19   computed: {
20     ...Vuex.mapState({
21       loadingShow: state => state.loadingShow,
22     }),
23   },
24   methods: {
25     ...Vuex.mapActions(['changeLoading']),
26   },
27   watch: {
28
29   },
30   beforeCreate(){
31
32   },
33   created(){
34
35   },
36   beforeMount(){
37
38   },
39   mounted(){
40     this.changeLoading(false)
41   },
42 }
```

# Vue.js - Vuex

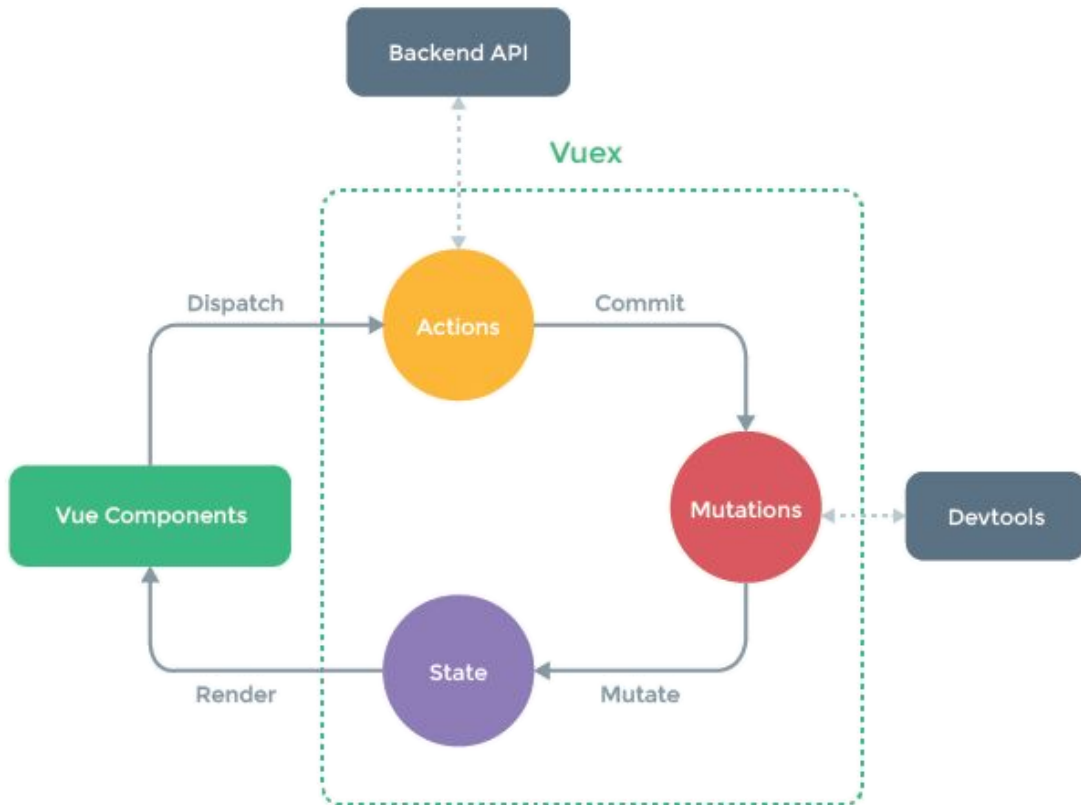

Manage **Model**

- state management

Global state

MapState

- **better maintenance**

```
if( new Date() >= new Date('2017/10/27 16:00') )  
    alert('謝謝大家') return
```
